Profile

Software Developer with 2+ years of professional experience developing and maintaining responsive, business-critical web applications. Strong front-end background in Vue.js, Nuxt.js, React.js, JavaScript, TypeScript, and Tailwind CSS, with hands-on experience integrating REST APIs, managing application state, building reusable components, and troubleshooting complex UI and data-flow issues. Contributes to a full-featured HRIS platform spanning attendance, payroll, scheduling, employee requests, reporting, and administrative workflows.

Education

Bachelor of Science in Information Technology (BSIT) Apr 2019

Camarines Sur Polytechnic Colleges (CSPC)

Employment

Software Developer Jun 2024 - Present

Intelliseven Inc.

- Contribute to the development and continuous improvement of 10+ HRIS modules, including Attendance, Daily Time Records, Payroll, Scheduling, Leave, Overtime, Attendance Corrections, Reimbursements, Deductions & Loans, Benefits, and Employee Reporting.
- Develop payroll and attendance workflows supporting multiple cut-off periods, weekly payroll, overtime, holiday pay, deductions, government contributions, night shifts, flexible schedules, rest days, leave, and attendance exceptions.
- Build automated Excel and PDF reporting features for payroll, attendance summaries, DTRs, employee reports, and bank-related payroll information, reducing reliance on manual report preparation.
- Integrate Vue/Nuxt interfaces with REST APIs and real-time attendance and notification updates, supporting data retrieval, filtering, pagination, synchronization, and transactional workflows.
- Diagnose and resolve front-end issues involving state synchronization, pagination, dashboard summaries, date handling, conditional rendering, payroll displays, and responsive behavior.
- Create reusable UI components and consistent responsive and dark-mode patterns across dashboards, navigation, forms, tables, modals, and mobile/desktop experiences.
- Collaborate with backend developers and team members to translate business requirements into maintainable features using Git-based development workflows.
